# DUANE NEWMAN

# XAMARIN.FORMS

Native UIs for iOS, Android, and Windows  
from a shared .NET codebase

# THE APP LANDSCAPE

- Android (Phone & Tablet)
  - Leading the market
  - 2x the user base of iOS
- iOS (Phone & Tablet)
  - First to market
  - Brought us the first wildly successful app store
  - Users spend \$4 on apps to every \$1 Android users spend (Fortune '14)
- UWP (Windows Desktop/Tablet & Phone)
  - Phone is not dead yet (new third party devices)
  - Strong support in enterprise
  - Lots of business PCs & phone is free

# TRADITIONAL APP DEVELOPMENT

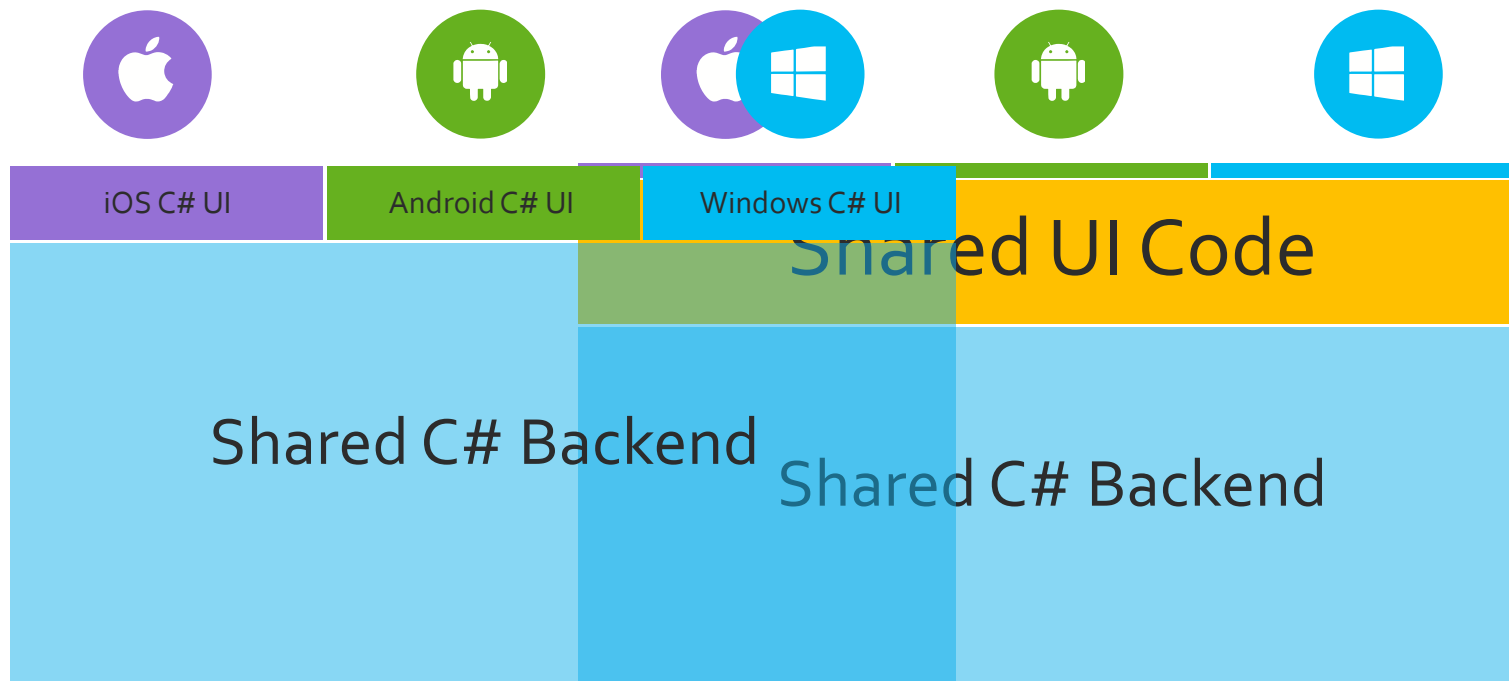

# HYBRID APPS

Quick development with common codebase,  
but some limitations.

# NATIVE APPS, WRITTEN IN .NET & C#

Traditional Xamarin Approach

With Xamarin.Forms:  
More code-sharing, all native

# XAMARIN FORMS

So you can concentrate [on] doing the 60-70% but you always have to spend some time writing the UI for that platform and Xamarin.Forms will help you [do] the extra 30% in a breeze

-Lino Tadros, .NET Rocks #1042

# BAKED-IN FEATURES

Shared UI Code

Shared C# Backend

- ✓ 40+ Pages, layouts, and controls  
(Build from code behind or XAML)
- ✓ Two-way data binding
- ✓ Navigation
- ✓ Animation API
- ✓ Dependency Service
- ✓ Messaging Center

# XAMARIN.FORMS XAML

So that's the big thing is that your expressing what your intent is with the XAML but its rendered with the native UI of the tool.

-Carl Franklin, .NET Rocks #1042

# COMMON XAML – NATIVE UI

```
<?xml version "1.0" encoding "UTF-8"?>
<TabbedPage xmlns "http://xamarin.com/schemas/2014/forms"
  xmlns:x "http://schemas.microsoft.com/winfx/2009/xaml"
  x:Class "MyApp.MainPage">
  <TabbedPage.Children>
  <ContentPage Title "Profile" Icon "Profile.png">
    <StackLayout Spacing "20" Padding "20"
      VerticalOptions "Center">
      <Entry Placeholder "Username"
        Text "{Binding Username}"/>
      <Entry Placeholder "Password"
        Text "{Binding Password}"
        IsPassword "true"/>
      <Button Text "Login" TextColor "White"
        BackgroundColor "#77Do65"
        Command "{Binding LoginCommand}"/>
    </StackLayout>
  </ContentPage>
  <ContentPage Title "Settings" Icon "Settings.png">
    <!-- Settings -->
  </ContentPage>
  </TabbedPage.Children>
</TabbedPage>
```

# GETTING STARTED

DEMO TIME

# XAMARIN FORMS IMPROVEMENTS

- Styles! (Plus platform specific styles)
- Dynamic resources
- Behaviors
- Triggers
- Improved binding support
- Sleep/Resume/Start events
- Application level resource dictionary
- Better font properties
- Compiled XAML
  - Performance, faster loading
  - Smaller App Size
  - See XAML Errors at build vs runtime
- Better Layout inspection
- Enhancements to ListView
  - Caching (smoother scrolling)
  - Better Feedback on scroll position
  - Header & Footer
  - Pull to Refresh
- Application
  - Modal Navigation Events (Pushing/Pushed, Popping/Popped)
- Data Templates
- URL Navigation
- Margins

# FUTURE OF XAMARIN FORMS

- Platform Effects
- Control Templates
- UWP Maps
- Themes
- Native Embedding (requires shared project)
- XAML Previewer (Design Time Preview)
  - In Xamarin Studio Preview and coming to Visual Studio
